SUMMARY OF QUALIFICATIONS

- Full-Stack Software Developer in the final semester of Software Engineering Technology with experience building modern web applications using RESTful and GraphQL APIs.
- Strong frontend expertise developing dynamic user interfaces using HTML, CSS, JavaScript, React, and Next.js with focus on usability, responsive design, and component-based architecture.
- Backend development experience using C#, ASP.NET Core, Java, and Spring Boot including API development, system integration, debugging, and performance optimization.
- Cloud deployment experience with AWS services including containerized applications and API management.
- Proficient in relational and NoSQL databases including MySQL, SQL Server, MongoDB, and DynamoDB with experience in schema design, querying, and optimization.
- Experience with software testing, QA validation, and debugging across frontend and backend workflows including unit testing, exploratory QA, and production system testing.
- Strong collaborator and communicator with Agile team experience, effective Git/GitHub practices, and ability to quickly learn new technologies.

PROFESSIONAL EXPERIENCE

- QA Tester (Part Time), Beyond Role Plays**
 - Improved AI platform reliability by identifying 140+ latency and response defects through exploratory QA testing.
 - Enhanced user experience stability by documenting defects and supporting regression validation across releases.

11/2025 – Present
Mississauga, ON
- Software Developer Intern, Ontario Public Service (OPS)**
 - Improved software reliability by executing 100+ automated JUnit tests achieving 95% code coverage.
 - Reduced post-release defects by 25% by identifying and resolving 50+ issues through manual QA testing.
 - Accelerated deployment readiness by collaborating with cross-functional teams on testing, debugging, and release validation.

09/2024 – 08/2025
Toronto, ON
- Peer Tutor, Centennial College**
 - Improved peer academic performance by simplifying complex programming and cloud concepts.
 - Strengthened collaboration and communication skills through structured mentoring sessions.

05/2024 – 12/2025
Toronto, ON
- Property Supervisor (Part Time), HR Property / Paragon Security**
 - Maintained operational safety across facilities by supervising daily security operations and compliance procedures.
 - Improved incident response efficiency by coordinating teams, monitoring alarm systems, and managing emergencies.

04/2021 – Present
Mississauga, ON

EDUCATION

Software Engineering Technology (Co-op) Advanced Diploma, *Centennial College*

Toronto, ON

CGPA: 4.3 / 4.5

TECHNICAL SKILLS

Languages

Java, C#, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Backend Development

ASP.NET Core, Spring Boot, REST APIs, GraphQL APIs, SQL Microservices, MVC architecture, authentication workflows

Databases

MySQL, SQL Server (AWS RDS), MongoDB, DynamoDB

Frontend Development

React, Next.js, HTML, CSS, JavaScript, Thymeleaf
Responsive UI design, state management, REST API integration

Cloud & DevOps

AWS (EC2, ECS/Fargate, ECR, RDS, DynamoDB, Lambda, IAM, CloudWatch) Docker containers, Google Apigee, Azure Fundamentals

Tools

Git, GitHub, Eclipse, Visual Studio Code, Postman, Maven, JUnit, Linux

SELECTED PROJECTS

Hockey Management Application (Team Project), <https://github.com/oladegs/hockeyApplication>

- Built microservices-based sports platform using Spring Boot, React, and MongoDB supporting scalable CRUD services.
- Improved modular system architecture through distributed RESTful service design.

OutbreakWatchTO (Cloud Team Project), <https://github.com/oladegs/outbreakWatch TO>

- Supported development of cloud-native monitoring platform using ASP.NET Core, Next.js, Docker, AWS ECS/Fargate, and RDS.
- Contributed to deployment pipelines and API integration improving scalability and system accessibility.

Amazon-Style E-Commerce Web Application, <https://oladegs.github.io/Amazon UI/>

- Developed responsive frontend with dynamic product rendering, checkout workflows, and cart functionality improving usability simulation.
- Tested user flows and frontend logic to ensure consistent performance and reliable interaction.

Online Flight Reservation System, <https://github.com/oladegs/Online FlightReservation>

- Built full-stack booking system using Spring Boot, Thymeleaf, and MySQL enabling secure authentication and reservation workflows.
- Designed database schema and optimized queries improving application reliability and backend performance.

CERTIFICATIONS

AWS Certified Cloud Practitioner (CCP)

Amazon Web Services
